

Groundhog Day

February 2 is Groundhog Day.

Groundhogs are small brown animals. They live in burrows.

Burrows are holes in the ground. Groundhogs dig their burrows with their sharp, curved claws.

If Phil the Groundhog comes out of his burrow on February 2 and sees his shadow, then there will be six more weeks of winter weather. If he doesn't see his shadow, then there will be an early spring.

Some people believe this story; other people think it is folklore. Folklore isn't true.
