

Boats

Read Aloud Worksheet

Boats float on the water. These boats are floating near the coast of the Pacific Ocean.

Boats

Boats are long with flat bottoms. The inside of the boat is hollow. That is where people sit. The outside of the boat is waterproof so water does not leak into the boat. If water leaks into the boat, it can sink.

Some boats have sails but others have motors. The sails and motors propel the boat forward.

Riding in a boat is relaxing if you don't get seasick. The rocking motion of a boat on water can cause some people to feel sick.

Most people enjoy riding in a boat. Do you?
